Initial History and Examination

Portable working notes; record relevant findings. Use institutional processes for formal records.

Patient / ID _____ Second ID _____ Date/time _____

Presenting concerns and history of present illness

Background > timeline > key positives / negatives; patient priorities.
Symptoms / impact; triggers / relief; prior evaluation / treatment response.

Past medical history

Diagnoses / complications; specialists; prior tests.
Falls / loss of consciousness.

Procedures and major events

Operations / admissions / ED visits; injuries;
devices / support therapies; complications.

Medication history

Prescription / OTC / supplements; actual use / adherence / response; recent changes / discrepancies.
Relevant drug details; prescriber / pharmacy / verification source.

Allergies and adverse reactions

Agent / reaction / severity; none known, unknown or unassessed.

Family history

Relative / condition / age at onset; hereditary pattern.
Unknown history if applicable.

Social context and exposures

Home / support / access; work / travel / exposures;
substances; diet / activity / sleep.

Contacts and referral Contact _____ PCP / referring clinician _____

Source / reliability / interpreter _____ Clinician _____

Reference frameworks: China's 18 core medical quality and safety systems; US CMS hospital Conditions of Participation (CoPs), Joint Commission National Patient Safety Goals (NPSGs; replaced by NPGs for hospitals in 2026), and ACGME Common Program Requirements (CPR); UK NICE CG50 and NHS England/CPOC NatSSIPs; Germany's G-BA QM-RL.
Drawing on selected principles from these frameworks, this template supports initial assessment, inpatient care, and the learning and teaching of clinical reasoning and patient management. It does not replace official hospital or institutional records, orders, management systems or governance responsibilities.

History Examination and Plan

Actual findings; detailed reasoning for active or uncertain problems.

Patient / ID _____ Second ID _____ Date/time _____

Clinician _____ Additional history source _____

Vitals BP _____ HR _____ RR _____ T _____ SpO2 / O2 _____ Wt _____

Review of systems

General / skin / HEENT / cardiac / respiratory / GI / GU;
MSK / neuro / endocrine / blood / lymph / psych.

Physical examination

General / skin / HEENT / neck / heart / lungs / abdomen;
limbs / MSK / neuro / mental status / focused findings.

Sexual and reproductive history

Menses / menopause / pregnancy; contraception / plans;
partners / practices / STI history / protection.

Function and mental status

Daily activities / mobility / falls; cognition / mood;
medication management; safety / self-harm risk.

Immunization review

Flu / COVID / RSV; Td/Tdap; pneumococcal / zoster;
HPV / HepB / MMR / varicella; risk / travel vaccines.

Preventive care review

Cancer; CVD / metabolic; bone; HIV/HCV;
mental health / substance use. Eligibility / prior results.

Key results and additional records

Key labs / imaging: sample date, units, source and significance; check the original report.
Important abnormal results: notification / action / review; missing results: owner / next step.

Assessment and plan

A: priorities / summary / likely cause; evidence for / against; key alternative / uncertainty.
P: tests / treatment / expected response; preferences / understanding; review / follow-up / return advice.
If-then plan / pending actions as needed; include owner, deadline and contact.
